Development of the innovative territorial cluster of aircraft and shipbuilding of the Khabarovsk territory

The goal of creating a network of innovative territorial clusters in the regions of Russia is to increase business competitiveness by using the potential of geographical proximity of production, scientific, educational, and infrastructure organizations. The cluster of aircraft and shipbuilding of the Khabarovsk territory is formed on the basis of defense industry enterprises producing products that are competitive in the world markets. As the foreign practice shows, the fulfillment of orders for the creation of high-tech military equipment can become the basis for the subsequent development of innovative systems. The enterprises of aircraft and shipbuilding of the Khabarovsk territory show high rates of modernization and increase in the products sales. Around the core of the cluster, a belt of small innovative companies begins to form. Innovative infrastructure institutions are being created: business incubator, engineering centers. In the future, this makes it possible to implement the concept of the Regional Innovation System in the Khabarovsk territory.

Keywords: *innovative territorial cluster, defense sector, the Khabarovsk territory, regional innovation system.*
