## **Assessment of the relationship between education and income in the region**

**H**uman capital is an integral assessment of the quantitative and qualitative characteristics of the population. Human capital depends on the economic and social processes in the regions. The results of economic research show that the human consists of two parts: amount population and the qualitative characteristics of the population. The article discusses the problems associated with the formation of a systematic approach to the formation of high-level human capital. The author analyzes the main research results of the relationship between the characteristics of human capital in Russia as a whole and, in particular, in the Far-Eastern region. The main method for analyzing the data obtained is correlation and regression analysis. The author comes to the conclusion that there is a «helix» of interaction between the level of income of the population and the level of education in the process of forming human capital.

**Keywords:** human capital, level of education, population income .
