Differentiation of retail trade in the Khabarovsk Territory

The lack of trade services can lead to a decrease in the quality of life of the population, and as a result, the outflow of the population to other regions. It is necessary to assess the dynamics, scale and level of retail trade development in the Khabarovsk Territory, to assess the intraregional differentiation of the population's access to retail trade services. Conclusions are drawn about an increase in the concentration of trade in the cities of Khabarovsk and Komsomolsk-on-Amur, as well as an increase in the differentiation in the consumption of retail trade services in the regions of the region. Areas with insufficient provision of retail space were identified. The directions of state regulation in this matter are proposed.

Keywords: retail trade, retail turnover, retail turnover per capita, number of stores, retail space, intraregional differentiation.
