Construction and improvement of the public health system in conditions of normalization of epidemic prevention and control (on the example of PRC)

New coronavirus pneumonia has had a significant impact on people's health and safety since the outbreak in the early 2020. The latest version of the new coronavirus pneumonia virus is still spreading around the world. China's public health system has passed a severe test: under the leadership of the Chinese Communist Party and the joint efforts of people of all ethnic groups, China won a great victory in the anti-epidemic campaign. Nevertheless, the public health system has also identified some challenges that need to be actively addressed in the area of medicine and health during the prevention and control of epidemics. This article deals with these issues.

Keywords: post-epidemic era, epidemic of new crown pneumonia, public health system, public health management.
