Abstract. *In the article on the base of sociological research assessment of migration situation in the Krasnoyarsk territory is given. Measures to improve migration situation are offered. Complex epidemiological situation in the region led to the choice of intelligence research. Non-random (spontaneous) types of selection were used. Questionnaire method of collecting information was used. Surveys were conducted from November to December 2020 and covered 400 residents of the region. As a result of the study, it turned out that old-timers are not particularly worried about the arrival of foreign labor migrants. They are more concerned about the other aspects of migration. First of all, there is the outflow of highly qualified specialists and graduates of universities («brain drain»). Second, there is a migration of the local population. This is the opinion of both students and the adult population (not students). Based on these results, the author of the paper concludes that migration problems of the Krasnoyarsk territory lie mainly in the economic plane. Measures to retain the local population must be strengthened, especially by creating jobs.*

Keywords: *migration situation, migrants, the Krasnoyarsk territory, sociological survey, questionnaire questioning*
